The passage of the Children First Act in 1988 ushered in a new generation of analysis and research about the overall quality and condition of education in Louisiana. As the national reform of education continues to evolve, Louisiana is steadfast in its commitment to quality education and school accountability.

*Progress Profiles* (*School Report Cards*, *District Composite Reports*, and the *State Report*) provide information about schools to parents and the general public, provide a basis for educational planning, and increase educational accountability at all levels. By providing policy makers, parents, and other interested citizens valuable information on the inputs, processes, and outcomes of public education, these documents also offer a valuable resource for advancing school improvement.

The Progress Profiles Program, which is administered by the Louisiana Department of Education (LDE), Office of Management and Finance, Division of Planning, Analysis and Information Resources, was founded on the premise that educational improvement is most successful when parents, school staff, and policy makers have access to accurate information on a wide range of factors believed to influence student learning. The indicators included in the *Progress Profiles* were carefully selected because they:

- have been demonstrated through school effectiveness research to be related to student learning;
- represent key features of schooling that can be influenced by parents, school staff, and policy makers, and thus are useful for school improvement purposes; and
- yield the maximum amount of accurate and essential information possible without posing undue reporting burdens at either the school or district level.

To offer the most comprehensive overview possible and serve the specific needs of varied audiences, three levels of reporting are provided.

1. *School Report Cards* are tailored to the needs of parents and the general public. For 1997-98, *School Report Cards* were produced for **1,414 of 1,445** public elementary, middle/junior high, high, and combination schools statewide.
2. *District Composite Reports* are produced for all 66 Louisiana public school districts. The most detailed and comprehensive of the three levels of reporting, these reports offer local and state-level policy makers longitudinal data.
3. The *Louisiana Progress Profiles State Report* is best suited to the needs of the general reader because it provides a succinct overview of the major characteristics of Louisiana education based on *School Report Card* findings.

---

*“Any effort to improve schools must be designed to meet the goal of creating an active, thinking curriculum in specific disciplines, and success should be judged by whether increasing numbers of students reach agreed-upon performance standards.”*

—Bill Honig

*Phi Delta Kappan*, June 1994

---

## Purpose of the *District Composite Report*

The purpose of the *District Composite Report* is to provide information relevant to the condition of education in Louisiana. This report provides detailed longitudinal information on various indicators as well as analysis of data where feasible. It serves as an effective tool to aid policy makers and district administrators in identifying opportunities for school improvement.

## Organization of this Report

The summary tables following this introduction offer district-level information for all indicators. In addition to quick-reference tables at the front of this report, district socioeconomic and demographic data are provided to aid readers. Financial information is included to give a more complete picture of Louisiana school districts.

The remainder of the report is organized into five parts, each encompassing a series of related educational indicators.

- *Part 1. District Summary.* School performance is influenced by community socioeconomic characteristics and by the level of local financial support for public education. Part 1 therefore presents parish (as opposed to district) demographic and socioeconomic indicators ranging from household income distribution and teen pregnancy rate to district revenue, expenditures, and average teacher salaries. District summary tables of all *Profile* indicators also are provided in Part 1.
- *Part 2. School Characteristics.* The context within which students are educated and the level of educational resources available to them impact learning. Part 2 focuses on key educational “inputs” and resources at the school level, i.e., the size of the student body and faculty, the school’s category (e.g., elementary schools, middle schools, etc.), class sizes, and the academic preparation of faculty.
- *Part 3. Student Participation.* For students to receive an education, they must first have the opportunity to learn; thus, the extent to which students are present and actively engaged in schooling is of vital importance (Oakes, 1989). Part 3 presents

three indicators that provide some measure of student participation: attendance, suspensions/expulsions, and dropouts.

- *Part 4. Student Achievement.* Part 4 reports three types of school-level outputs: student performance on 1) reading level evaluation results for grades 2 and 3, which assess students’ ability to read and comprehend on grade level, 2) criterion-referenced tests (CRTs), which measure students’ performance on state-prescribed curricula, and 3) norm-referenced tests (NRTs), which indicate how Louisiana students compare with other students nationally. The Reading Level Evaluation Results reported on the *School Report Cards* are based on the assessment conducted on second and third grade students by their teachers at each profile school. The CRT results reported on the *School Report Cards* are based on student performance on Louisiana Educational Assessment Program (LEAP) tests administered at the third, fifth, and seventh grade levels and on the Graduation Exit Examination (GEE), which is administered in grades 10 and 11. The NRT results, which are also part of LEAP, reflect student performance utilizing two tests: 1) *The Iowa Tests of Basic Skills (ITBS)* which is administered for grades 4, 6, and 8, and 2) *The Iowa Tests of Educational Development (ITED)* which is administered for grades 9, 10, and 11.
- *Part 5. College Readiness.* One goal of elementary-secondary schooling is to ensure that those students seeking an advanced education are adequately prepared for college. The *School Report Cards* present two indicators of college readiness: 1) student performance on the American College Test (ACT), a national test commonly used for college placement purposes, and 2) the percentage of high school graduates who take remedial courses as first-time college freshmen.

A brief narrative, organized as follows introduces each indicator presented in this report:

- an introduction to the indicator and its significance in the study and/or promotion of student learning;

- 
- a description of how data are organized in the accompanying table(s);
  - a description of how data appear in the *School Report Cards*;
  - definitions of key terms, where applicable;
  - formulas/equations used to calculate statistics, where applicable; and
  - the source(s) of the data presented.

A glossary at the end of this report provides operational definitions for key terms.

### **School Categorization**

The mission, organizational structure, and outcomes of schooling vary depending on the level of instruction (i.e., elementary, middle, etc.) (Levine & Lezotte, 1990). In recognition of this, the Profiles Program began in 1993-94 to group schools into four reporting categories based on level of schooling: elementary, middle/junior high, high, and combination (i.e., K-12).

Category comparison statistics are presented by district and for the state as a whole for those indicators that are not reported by grade level; these include class size, attendance, suspension, and expulsion. This homogeneous grouping of schools by level of instruction fosters probably the fairest comparisons; however, district and statewide comparison statistics also are provided.

*Note:* Category comparison statistics are provided for only those indicators that are reported at the school level. There are no category statistics for the testing and dropout indicators, which are reported by grade level and therefore have even greater comparability than those performance data that are reported by category.

All schools receiving 1997-98 *School Report Cards* are placed into one of four categories:

- *elementary*—any school whose grade structure falls within the K-8 range, excludes grades in the 9-12 range, and does not fit the definition for middle/junior high.
- *middle/junior high*—any school whose grade structure falls within the 4-9 range, includes grades 7 or 8, and excludes grades in the K-3 and 10-12 ranges.
- *high*—any school whose grade structure falls within the 6-12 range and includes grades in the 10-12 range, or any school that contains only grade 9.
- *combination*—any school whose grade structure falls within the K-12 range and is not described by any of the above definitions. These schools generally contain some grades in the K-6 range and some grades in the 9-12 range. Examples would include grade structures such as K-12; K-3, 9-12; and 4-6, 9-12.

If a school has been re-categorized due to a change in grade structure, that school's longitudinal data will appear in more than one category. For example, if Central High School had grades 9-12 from 1990-91 through 1992-93, its longitudinal data for those years would appear in the high school category. If Central High School became a K-12 school in 1993-94, its data in 1993-94 and thereafter would appear in the combination school category.

As a convenience to readers, the data tables that are organized by category are cross-referenced. In the above example, the high school category data would refer readers interested in Central High's longitudinal performance to the combination category data and vice versa.

### **Demographic Indicators Associated With Educational Attainment**

Research has shown that demographic and socioeconomic variables affect student achievement. An analysis of the background characteristics of the student population places the school performance indicators in their broader context and helps shed light on the degree of difficulty that certain school districts or states experience in educating their particular student populations. In other

---

words, inclusion of the demographic indicators in Part 1 provides a context for interpretation of the outcomes.

The *District Composite Report* presents the following socioeconomic and demographic information at the parish (not district), state and national levels:

- education attainment,
- labor force breakdown,
- unemployment rate,
- per capita income,
- household income distribution,
- population by race,
- single parent households,
- all persons living below the poverty level, and
- teen pregnancy rate.

The data are supplied by the U.S. Bureau of the Census, the Louisiana Department of Health and Hospitals, and Northeast Louisiana University Center for Business and Economic Research.

### **District Financial Overview**

There are many factors which contribute to the overall profile of a school district. Financial information is one of the vital factors which are part of that profile. Inclusion of this information in Part 1 helps the reader understand how a public school district functions, and it provides additional context for the interpretation of educational indicators.

### **Longitudinal Analysis: Tracking School Progress Over Time**

By law, the Progress Profiles Program is required to present six years of data (the current year and the five previous years). These longitudinal school-level data are presented in the *District Composite*

*Report*. Each year, the *Composite Reports* are updated by adding the most current year's data and deleting the data that are more than six years old. The *School Report Cards* and *Progress Profiles State Report*, on the other hand, present only the most current year of data so that parents and policy makers who want a very concise and current snapshot of education performance need not wade through voluminous amounts of information.

Incorporating longitudinal data in the *District Composite Report* enables policy makers to anticipate changes in educational outcomes, not just describe them (Smith, 1988). However, longitudinal reporting does complicate the presentation of data. To assist policy makers in interpreting data, tables in the *District Composite Report* have been formatted as follows:

1. *Cross-sectional data* (i.e., for any given year) are presented vertically in columns. School-to-school comparisons can be made within any given year by scanning up and down columns.
2. *Longitudinal data* are presented horizontally in rows. An individual school's progress on any single variable can be charted over time by scanning left-to-right across columns.
3. Schools are listed in *sequential order*, based on school site code and school category.
4. The 1995-96, 1996-97, and 1997-98 data are shaded as a reminder that 1995-96 was the first year that *Progress Profiles* data were extracted from the Student Information System (SIS), establishing a new baseline year for *Profiles* reporting purposes. **Comparisons between the 1995-96 and subsequent years to previous years' data are strongly discouraged (see box on next page).**

All longitudinal tracking of individual schools should be conducted with caution. Because schools, like other organizations, are constantly evolving, a school's name and/or grade configuration may change over time. Such changes may or may not signal a major change in the character of the school.

---

To facilitate longitudinal tracking of individual schools, the six-digit site codes that the LDE assigns to all public schools have been included in all tables. Barring a major change in grade structure at a school, these site codes remain constant over time and therefore are much more reliable identifiers than the school name itself.

In some instances, longitudinal data on a specific indicator are not available for every site due to school openings, closings, and/or reorganizations. Occasionally, an entire indicator may be added. For example, first-time college freshmen data were added to the *School Report Cards* in 1992-93. In instances such as these, the tilde symbol (~) represents “unavailable data.”

Data sometimes are not strictly comparable from one year to the next due to changes in reporting periods, data sources, and/or revisions in indicator definitions. In these instances, the data are footnoted to alert the reader to use caution in drawing longitudinal comparisons.

---

## **1995-96 Was A New Baseline Year Comparisons With Prior Years Data Are Strongly Discouraged**

Special caution is urged in comparing 1995-96, 1996-97, and 1997-98 performance information to data from prior years because the Progress Profiles Program underwent two major changes in 1995.

1. **All 1995-96, 1996-97, and 1997-98 Student Participation data (i.e., attendance, suspensions/expulsions, and dropouts), some School Characteristics data (i.e., October 1 membership), and some College Readiness data (i.e., graduates) were taken from the student-level Student Information System (SIS).** The SIS data are much more detailed and more precisely defined than the aggregated data collected in prior years. They are not comparable, however, to the school summary data reported prior to 1995-96.
2. **All Student Participation indicators and most Achievement Indicators (i.e., norm- and criterion-referenced test results) have been expanded to include both regular and special education students.** In previous years, these indicators were limited to regular education students.

As a special caution to readers, the columns of 1995-96, 1996-97, and 1997-98 data are shaded. Data from prior years are presented only for the convenience of readers whose information needs are more historical than comparative.

---

---

## The Challenge: Accurate and Reliable Reporting

Measurement is a process involving both theoretical as well as empirical considerations. Most assuredly, research based on the inadequate measurement of indicators does not result in a greater understanding of the particular indicator (Carmines and Zeller, 1979). Though it is widely recognized that the best educational policy is made when officials have access to accurate information, the use of inaccurate or unreliable data is more dangerous than no information at all. Recognizing this, every effort has been made to ensure the reliability and validity of the data reported on the *Progress Profiles*. Toward that end, LDE and district staff examine each indicator through a meticulous data correction and verification process.

The Progress Profiles Program has grown substantially over the past several years. The LDE has executed an elaborate process for data verification and analysis to ensure that quality is an intrinsic part of each *Progress Profiles* report.

## Satisfying the Need for Analysis

Though all states have some form of educational performance indicator system, the criticism is often heard that too few do anything with the data. “The missing ingredient in most education indicator systems is analysis,” notes Allen Odden. “Analysis is critical; it makes sense of the data, explores relationships among the inputs, processes, and outputs of the educational system, and makes policy recommendations for change” (Odden, 1990).

In keeping with national trends toward supplementing educational indicator systems with policy-relevant analysis, LDE staff research the relationships among various *School Report Card* indicators and explore their utility as predictors of student performance. The results of some analyses are presented in shaded boxes accompanying the narrative introduction to each indicator.

---

Parish Socioeconomic And Demographic Overview .....	1-1
District Financial Overview .....	1-3

---

## Parish Socioeconomic And Demographic Overview

---

The socioeconomic and demographic composition of the parish may shed light on household situations and thus the educational system of a school district. Issues such as income, poverty rate, single parent households, and teen pregnancy affect family function, which is strongly linked to achievement. This section examines state- and national-level information for each parish socioeconomic and demographic indicator presented.

### Definitions

- *Education Attainment*—is divided into three levels:
  1. Less than high school degree: includes persons of compulsory school attendance age or above who are not enrolled in school and are not high school graduates.
  2. High school degree: includes persons whose highest degree is a high school diploma or its equivalent and those who have attempted some college or have received an associate degree. Persons who completed the twelfth grade but did not receive a diploma are not included.
  3. Bachelor's degree or higher: includes those persons who have received a college, university, or professional degree.
- *Labor Force*—is divided into four categories:
  1. White collar: includes persons with executive, administrative, and managerial occupations; professional specialty occupations; technicians and related support occupations; sales occupations; and administrative support occupations, including clerical.
  2. Blue collar: includes persons with precision production, craft, and repair occupations; transportation and material moving occupations; positions held by machine operators, assemblers, and inspectors; and positions held by handlers, equipment cleaners, helpers, and laborers.
  3. Service & Other: includes persons with private household occupations, protective service occupations, and other service occupations.
  4. Agriculture: includes persons who perform farming, forestry, and fishing industry jobs.
- *Household Income Distribution*—is divided into seven major groups. The annual income range begins with below \$15,000 and ends with \$100,000 and above.
- *Population by Race*—is divided into three major groups, white, black, and “other.” The “other” category consists of Native Americans and Asian/Pacific Islanders. It should be noted that, according to the 1990 Bureau of Census data, Hispanic origin can be viewed as the ancestry, nationality group, lineage, or country of birth of the person or the person's parents or ancestors before their arrival in the United States. Persons of Hispanic origin may be of any race and are therefore included in the categories of white, black, and “other.”
- *Single Parent Household Rate*—is the number of single parent households divided by the total number of households.
- *Poverty Threshold*—is revised to allow for changes in the cost of living as reflected in the Consumer Price Index. According to the 1990 Bureau of the Census data, the average poverty threshold for a family of four persons was \$12,674.
- *Teen Pregnancy Rate*—is the total number of teenage girls under the age of 19 divided by the total number of pregnant women.
- *Per capita income*—is the average income computed for every man, woman, and child in a particular group. The Census Bureau derived per capita income by dividing the total income of a particular group by the total population in that group (excluding patients or inmates in institutional quarters).
- *Unemployment rate*—is the total number of persons not working, who are available and seeking work, regardless of age, as a percentage of the civilian labor force. This is considered the official unemployment rate and is typically cited in comparisons.

## St. Martin Parish Socioeconomic and Demographic Overview

As each school district works toward its educational vision and goals, social and economic factors within the parish may directly or indirectly affect the educational experience of students. An overview of the relevant demographic and socioeconomic profile of each parish places the education indicator data presented in this report in the proper context. These data provide a socioeconomic and demographic profile of the parish as a whole, not the public school district. In preparing this section, every effort was made to obtain the most recent data available for each indicator.

### Education Attainment

	Bachelor's or Higher	High School	Less Than High School
State	16.1%	68.3%	15.6%
Nation	24.7%	62.2%	13.1%

Sources: Northeast Louisiana University, Center for Business and Economic Research and NCES, 1995.

### Labor Force

	White Collar	Blue Collar	Service & Other	Agriculture
State	55.9%	27.4%	14.2%	2.5%
Nation	57.8%	25.6%	13.7%	2.9%

## District Financial Overview

Financial information broadens the understanding of how public school districts function and provides additional context for the interpretation of educational indicators. The two major components of the financial information are revenues and expenditures.

### Definitions

- **Revenues**—are governmental funds appropriated for public education. Revenues are received from four main sources:
  1. **Local**: monies collected directly by a district through taxes (ad valorem, sales, and use taxes), bonds, revenues from other local government units, tuition, transportation fees, earnings of investments, food service, and community service.
  2. **State**: monies received from the state government through Louisiana's Minimum Foundation Program (MFP) formula, grants-in-aid, and specific programs such as the Early Childhood Program.
  3. **Federal**: monies received from the federal government through a variety of programs such as Title I, Impact Aid Fund, Reserve Officer Training Corps Program (ROTC), Headstart Programs, School Food Service, Adult Basic Education, and Special Education.
  4. **District revenues per pupil**: total revenues divided by the adjusted October 1 funded student membership.
- **Expenditures**—are charges incurred, whether paid or unpaid, which benefit the current fiscal year. Total expenditures include the following categories:\*
- 1. **Instructional Expenditures**: monies spent for classroom instruction, pupil support, and instructional staff support.

2. **Non-instructional expenditures**: monies spent for school administration, business services, operations and maintenance, transportation, food services, enterprises, and community services.
3. **Facility Acquisition & Construction Services**: monies spent for activities concerned with acquiring land and buildings, remodeling buildings, constructing buildings and additions to buildings, initially installing or extending service systems and other built-in equipment, and improving sites.
4. **District expenditures per pupil**: total expenditures minus debt service divided by the adjusted October 1 funded membership.

Additional items frequently of interest to the public are *average salary of full-time teachers* and *beginning teacher salary*. Average salary calculations include full-time classroom teachers and librarians; special education teachers, aides, guidance counselors, and part-time teachers are not included. *Beginning teacher salary* is defined as the salary paid to a new teacher with a bachelor's degree and no experience. This information is different from *average salary of full-time teachers*, which is an average of all teachers' salaries in the district.

*Note: Some districts' financial data may be adjusted after the publication of this report due to audits. The financial information in this section is based on the December 1, 1998, figures provided by the Office of Management and Finance, LDE.*

\* Debt service and other long-term obligations are not included in expenditure figures because these monies provide services during multiple years and should not be attributed to only one year.

# St. Martin Parish Financial Profile

District Revenue by Source									
Revenue Source	1995-96			1996-97			1997-98		
	Amount	% of District Total	State Average %	Amount	% of District Total	State Average %	Amount	% of District Total	State Average %

## Faculty with a Master's Degree or Higher

---

Perhaps the most vital educational resource available to students is the school faculty. One indicator of faculty preparation is the level of academic training the staff has completed.

### Organization

Table 2, Faculty with a Master's Degree or Higher, presents the number and percent of faculty attaining a master's degree or higher. Data are presented for all faculty members in all schools in the districts that receive a *School Report Card*. Schools are presented in site code order. District and state totals are presented for comparison purposes.

### Data Presentation: *School Report Card*

The *School Report Card* displays the percent of faculty with a master's degree or higher.

### Definition

- *Faculty*—school-based instructional personnel. In addition to full-time classroom teachers, these individuals include principals,

assistant principals, guidance counselors, librarians, and other instructional staff (provided these individuals teach at least one class.)

### Method of Calculation

The formula used to compute the percentage of faculty who have a master's degree or higher is presented below. Itinerant staff members who are employed at multiple school sites are counted at each school in which they teach, but are counted only once in district and state percentages.

### Data Sources

*Site-based personnel*— district-reported data submitted to the LDE via the Profile of Educational Personnel (PEP).

*Faculty degree status*— district-reported data submitted to the LDE via the Profile of Educational Personnel (PEP).

---

### Formula Used to Calculate Percent of Faculty with a Master's Degree or Higher

$$\frac{\text{Percent of Faculty with a Master's Degree or Higher}}{\text{Total Number of Faculty at All Education Levels}} = \frac{\text{Number of Faculty with a Master's Degree or Higher}}{\text{Total Number of Faculty at All Education Levels}} \times 100$$

**Table 2**

~ = Unavailable Data

Small classes generally allow more time for pupil-teacher interaction and therefore are instrumental in promoting student learning, especially at the lower elementary grades. In recognition of that fact, the Board of Elementary and Secondary Education has set specific limits on the maximum size of classes at various grade levels (*Bulletin 741*). The maximum enrollment in grades K-3 is 26 students, while in grades 4-12 the maximum enrollment is 33 students. The limits do not apply to activity classes such as physical education, chorus, and band.

### Organization

Tables 3a, 3b, 3c, and 3d (Class Size Characteristics for Elementary, Middle/Junior High, High, and Combination Schools, respectively) present the number and percentage of classes that fall within various class size ranges. Data are presented for all schools in the district that receive a *School Report Card*, with schools presented by category and in site code order. District and state percentages are presented for comparison of all schools. Since 1993-94, district and state percentages based on school category also have been provided.

The *District Composite Report* presents class size information for grades K-12 in three ranges: 1-20, 21-26, and 27 or more students.

### Data Presentation: *School Report Card*

The *1997-98 School Report Card* provides 1997-98 class size information for grades K-12 by three ranges: 1-20, 21-26, and 27+. Category percentages are provided for comparison purposes.

### Definition

- *Class*—a grouping of children under the primary supervision and instruction of an individual teacher for all or part of the instructional day, as reported for the purposes of the *Annual School Report* (ASR) and identifiable by a specific ASR course code.

### Method of Calculation

The following criterion was applied to *Annual School Report* (ASR) data to determine which classes should be included/excluded from the class size calculations:

- Activity classes (which have a maximum allowable student count greater than 33) are excluded because their inclusion in the computation would skew the results.

---

### Formulas Used to Calculate Percent of Classes in Each of the Specific Class Size Ranges

$$\frac{\text{Percent of Classes in Specific Class Size Range}}{\text{Percent of Classes in Specific Class Size Range}} = \frac{\text{Number of Classes in Specific Class Size Range}}{\text{Total Number of Classes}} \times 100^*$$

\*Note: Due to school categorization, the numerator and denominator will vary. For example, Percent of Classes in Elementary Schools in Specific Class Size Range = (Number of Classes in Elementary Schools in Specific Class Size Range / Total Number of Classes in Elementary Schools) X 100.

---

## Data Source

District-reported data from the *Annual School Report* (ASR).

### References

Franklin, B.J. and Glascock, C.H. (1994, November). School configuration: Which configuration is best? Paper presented at the annual meeting of the Mid-South Educational Research Association, Nashville, Tenn.

Louisiana Department of Education, *Louisiana Handbook for School Administrators* (Bulletin 741), Baton Rouge, La.

---

*LDE researchers have explored the relationship between school configuration and Report Card indicators related to student participation and testing. Middle school students perform significantly lower in grades 6 and 7 for all indicators than grades 6 and 7 students in elementary or combination (K-12) schools (Franklin and Glascock, 1994).*

# *Part 3. Student Participation*

---

Student Attendance .....	3-1
Student Dropouts .....	3-7
Students Suspended and Expelled .....	3-11

---

More than a decade ago, American schools were challenged by *A Nation at Risk* to do whatever necessary to reduce the amount of instructional time lost to absenteeism (Bennett, 1988). As educators have long recognized, occasional absences cause some learning disruption, but frequent student absences can severely reduce academic progress (Bamber, 1979).

The percent of student attendance reflects the percentage of time the average student is present within the total number of instructional days. Since 1993-94, attendance has been calculated to the nearest half day.

*Prior to 1995-96, attendance data were reported for regular education students only. The 1995-96, 1996-97, and 1997-98 data include special education students as well; hence, comparisons with prior years data are strongly discouraged.*

### Organization

Tables 4a, 4b, 4c, and 4d, Student Attendance, present the percent of student attendance for each school in the district receiving a *School Report Card*. District and state percentages are presented for comparison of all schools. Schools are presented by category and in site code order. Since 1993-94, district and state percentages based on school category have been provided for comparison purposes.

### Data Presentation: *School Report Card*

The 1997-98 *School Report Card* presents the percent of student attendance for the school, district, and state, based on the school category.

*Of all the School Report Card indicators studied, student attendance yields the strongest positive relationship with average test scores. This is especially evident in secondary schools with higher attendance. These schools show a marked increase in the percentage of students passing the Graduation Exit Exam (Franklin and Crone, 1993).*

### Definitions

- *Aggregate days attendance*—the total number of days that students are *present* at the school site over the course of the school year.
- *Aggregate days membership*—the total number of days that students are *enrolled* (but not necessarily *present* at the school site) over the course of the school year.
- *Day of attendance*—effective with the 1992-93 school year, “a student is considered to be in attendance when he or she 1) is physically present at a school site or is participating in an authorized school activity and 2) is under the supervision of authorized personnel. This definition extends to students who are homebound, assigned to and participating in drug rehabilitation programs that contain a state-approved education component, or participating in school-authorized field trips.”

“Students who meet the above criteria and are present at the school site for 26-50 percent of the student’s instructional day shall be credited with a half day of attendance. Those who meet the above criteria and are present for at least 51% of the student’s instructional day are credited with a whole day of attendance. Students who are not physically present or who are participating for 25 percent or less of their instructional day will be considered absent for reporting purposes. Absences, whether excused or unexcused, shall be counted as an absence for reporting to the Department.” (*Bulletin 741*)

As mentioned previously, the above definition was piloted for the 1992-93 school year and has been in effect statewide since the 1993-94 school year.

- *Percent of student attendance*—the ratio of aggregate days student attendance to aggregate days membership.

### Method of Calculation

The formulas used in calculating percent of student attendance are presented on the following page.

---

## Data Sources

The attendance indicator is based on district-reported data submitted to the LDE via the Student Information System (SIS).

## Formulas Used to Calculate Percent of Student Attendance

### School-level Aggregation

$$\text{Percent of Student Attendance} = \frac{\text{Aggregate Days of Attendance}}{\text{Aggregate Days of Membership}} \times 100$$

### District-level Aggregation

$$\text{Percent of Student Attendance} = \frac{\text{Total Aggregate Days of Attendance for All Schools in the District}}{\text{Total Aggregate Days of Membership for All Schools in the District}} \times 100^*$$

### State-level Aggregation

$$\text{Percent of Student Attendance} = \frac{\text{Total Aggregate Days of Attendance for All Schools in the State}}{\text{Total Aggregate Days of Membership for All Schools in the State}} \times 100^*$$

\*Note: Due to school categorization, the numerator and denominator will vary. For example, Percent of Student Attendance in Elementary Schools = (Aggregate Days of Attendance for All Elementary Schools / Aggregate Days of Membership for All Elementary Schools) X 100.

<sup>2</sup> Effective with 1995-96, both regular and special education students are included in the calculations; hence, prior years' data are not comparable.

~ = Unavailable Data

Students who drop out of school deprive our country of potentially valuable human resources (Hershaff, 1980). Research indicates that dropping out of school has negative consequences both for the individual who drops out and for society (Curry, Payson, and Sandhu, 1990).

Over the last 20 years, there has been a general increase in high school completion rates. Despite these gains, dropout rates remain at unacceptably high levels. The monitoring of high school dropout rates provides one measure of our progress in increasing the educational attainment of the state's youth. Unfortunately, determining the exact number of students who actually drop out of school is extremely difficult.

*According to LDE research, the percent of student dropouts has a strong negative correlation with test scores and attendance, and a positive correlation with school size. Thus, schools with low average test scores and low average attendance generally experience high dropout rates. Larger schools (those with enrollments of roughly 700 or more students) exhibit higher dropout rates than do smaller schools (Franklin and Crone, 1993).*

*Prior to 1995-96, attendance data were reported for regular education students only. The 1995-96, 1996-97, and 1997-98 data include special education students as well; hence, comparisons with prior years data are strongly discouraged.*

### Organization

Table 5, Student Dropouts, presents the number and percent of students (by grade level) who drop out of school for grades 7-12. Data are presented by school site code for all *Report Card* schools in the district whose grade structure includes grade seven or higher. District and state numbers and percents are offered for comparison purposes.

### Data Presentation: *School Report Card*

School-level counts and percents are reported (by grade) for grades 7-12. Also, district and state percents are presented.

### Definitions

- *Cumulative Enrollment*—the sum of all students enrolled in a school or district for at least one school day during the course of the school year, used as the denominator for calculating school- and district-level suspension and expulsion percents.
- 1. *Dropout*—the National Center for Education Statistics (NCES) defines a dropout in the following manner. A school dropout is an individual who was enrolled in school at some time during the previous year, was not enrolled at the beginning of the current school year, had not graduated from high school or completed an approved educational program, and did not meet any of the following exclusionary conditions:
  - Death;
  - Temporary absence due to suspension or illness; or
  - Transfer to another public school district, private school, or state- or district-approved education program.

For the purpose of this definition:

- A school year is the 12-month period of time beginning with the normal opening of school in the fall, with dropouts from the previous summer reported for the year and grade for which they fail to enroll;
- An individual has graduated from high school or completed an approved education program upon receipt of formal recognition from school authorities; and
- A state- or district-approved education program may include special education programs, home-based instruction, and school-sponsored GED preparation.

---

## Method of Calculation

Louisiana's school- and district-level student dropout percents are calculated by dividing the total number of student dropouts in each grade for grades 7-12 by the cumulative enrollment for that grade. The formulas used to produce percent of student dropouts are presented at the bottom of this page.

## Data Sources

The dropout indicator is based on district-reported data submitted to the LDE via the Student Information System (SIS).

## Students Suspended and Expelled

Student suspension not only harms students by depriving them of valuable instruction, it also harms communities, the individual school, and school district (Garibaldi, 1978).

*Prior to 1995-96, attendance data were reported for regular education students only. The 1995-96, 1996-97, and 1997-98 data include special education students as well; hence, comparisons with prior years data are strongly discouraged.*

### Organization

Tables 6a, 6b, 6c, and 6d, Students Suspended and Expelled, present the number and percent of students suspended and the number and percent of students expelled for each school in the district receiving a *School Report Card*. Schools are listed by category and in site code order. District percentages are presented for comparison of all schools. Since 1993-94, percentages based on the school category also have been provided for comparison purposes.

It should be pointed out that the “students suspended” number reflects the number of students at the school site who were suspended at least once during the school year. Because some students are suspended more than once over the course of the school year, the total incidence of suspension may be greater than the number reported here.

### Data Presentation: *School Report Card*

The 1997-98 *School Report Card* presents the school-level number and percent of students suspended and expelled. Category statistics are provided at the district level for comparison purposes.

### Definitions

- *Cumulative Enrollment*—the sum of all students enrolled in a school or district for at least one school day during the course of the school year, used as the denominator for calculating school- and district-level suspension and expulsion percents.
- *In-school Expulsion*—student is temporarily removed from his/her usual classroom placement to an alternative setting for a period of time specified by the LEA and no interruption of instructional services occurs.
- *In-school Suspension*—student is temporarily removed from his/her usual classroom placement to an alternative setting for a minimum of one complete school day and no interruption of instructional services occurs.
- *Out-of-school Expulsion*—removal (exit) of a student from school for a determined number of days with no provision of instructional services.
- *Out-of-school Suspension*—student is temporarily prohibited from participating in his/her usual placement within school with no provision of instructional service; only suspensions resulting in removal for at least one full day are included.

*Schools which report comparatively high suspension rates tend to serve more low-income students than those which report low suspension rates. Suspension rates tend to be higher among large schools. Middle schools and secondary schools report higher suspension rates than schools with other grade configurations. Finally, class enrollments are larger in high-suspension schools (Kennedy, 1993). This research is further supported by Franklin and Glascock (1994) who found that suspension rates are significantly higher in middle schools than elementary or combination (K-12) schools.*

---

## Method of Calculation

Suspensions and expulsions are calculated for students enrolled in grades K-12. The formulas listed at the bottom of this page were used to calculate the desired school- and district-level percentages for each school category, as well as district-level percentages for all schools.

## Data Sources

The suspension and expulsion indicators are based on district-reported data submitted to the LDE via the Student Information System (SIS).

## Formulas Used to Calculate Percent of Students Suspended, Expelled

### School-level Aggregation

$$\text{Percent of Students Suspended} = \frac{\text{Number of Students Suspended}}{\text{Cumulative Enrollment}} \times 100$$

$$\text{Percent of Students Expelled} = \frac{\text{Number of Students Expelled}}{\text{Cumulative Enrollment}} \times 100$$

### District-level Aggregation

$$\text{Percent of Students Suspended} = \frac{\text{Total Number of Students Suspended for All Schools in the District}}{\text{Cumulative Enrollment for All Schools in the District}} \times 100^*$$

$$\text{Percent of Students Expelled} = \frac{\text{Total Number of Students Expelled for All Schools in the District}}{\text{Cumulative Enrollment for All Schools in the District}} \times 100^*$$

\*Note: Due to school categorization, the numerator and denominator will vary. For example, Percent of Elementary Students Suspended = (Number of Elementary Students Suspended / Cumulative Elementary Student Enrollment) X 100.

# Reading Level Evaluation Results

---

The ability to read is essential to survive in our society. Many children learn to read quickly and efficiently once exposed to formal instruction. However, this is not an easy task for some children due to a variety of reasons. These children require high quality preschool and kindergarten programs and excellent primary instruction that emphasize language and literacy skills. Act 450 of the 1997 Legislative Session required each second and third grade teacher to report the number of students reading below grade level within the first thirty days of school.

## Organization

Tables 7a and 7b present Reading Level Evaluation Results for grades 2 and 3 respectively. These results present the number and percent of students reading below, on, and above their grade levels. This information is provided for each school in the district receiving a *School Report Card*, with schools listed in site code order. District and state results are presented for comparison purposes. Please use caution when comparing, as each district was permitted to select its own assessment instrument(s).

## Definition

The following students were evaluated and included in the assessment results:

- All regular education students enrolled as of October 1, 1997;
- All special education students whose IEP designate that they are in a specially designed, regular instructional program;
- All Limited English Proficient (LEP) students who were enrolled in and completed at least two full consecutive academic years in an English-speaking school (including kindergarten);
- Students in alternative programs or placements who are addressing regular curriculum standards; and
- All disabled students according to Section 504.

## Assessment Instruments

Each teacher used one of the following types of assessment instruments:

- Basal reading test
- Informal reading inventory
- Computerized reading inventory
- Other standardized tests, such as norm-referenced tests, criterion-referenced tests, etc.

## Data Presentation: *School Report Card*

The *1997-98 School Report Cards* present school-level count and percent of students reading below, on, and above their grade levels for grades 2 and 3.

## Method of Calculation

The formula used to compute the percents of students reading below, on, and above their grade levels is presented on the following page.

## Data Sources

The Reading Level data is based on district-reported data submitted to the Louisiana Department of Education, Division of School Standards, Accountability and Assistance.

---

**Formula Used to Calculate Percent of Students Reading Below, On, and Above Their Grade Levels**

$$\begin{array}{l} \text{Percent of Students} \\ \text{Reading Below} \\ \text{Grade Level} \end{array} = \frac{\text{Number of Students Reading Below Grade Level}}{\text{Total Number of Students Assessed in that Grade}} \times 100$$

$$\begin{array}{l} \text{Percent of Students} \\ \text{Reading On} \\ \text{Grade Level} \end{array} = \frac{\text{Number of Students Reading On Grade Level}}{\text{Total Number of Students Assessed in that Grade}} \times 100$$

$$\begin{array}{l} \text{Percent of Students} \\ \text{Reading Above} \\ \text{Grade Level} \end{array} = \frac{\text{Number of Students Reading Above Grade Level}}{\text{Total Number of Students Assessed in that Grade}} \times 100$$

## Criterion-referenced Test (CRT) Results

---

Educational tests such as criterion-referenced tests (CRTs) are, in one form or another, tests of academic achievement based on a pre-stated set of standards.

The CRTs administered in this state are part of the Louisiana Educational Assessment Program (LEAP) and are administered in April of each year to public school students at specified grade levels. For the secondary level, the CRT is the Graduation Exit Examination (GEE).

These tests are administered to all students with the exception of special education students whose educational program is Alternative to Regular Placement (ARP). The Progress Profiles Program reports scores for all students taking the tests. This reflects the same reporting format used by the LEAP.

In Louisiana, CRTs provide a measure of the extent to which students meet state-established, grade-level skill requirements in the following subject areas:

- *Grades 3 and 5*—Language Arts and Mathematics,
- *Grade 7*—Language Arts and Mathematics, and
- *Secondary Level (GEE)*—English Language Arts, Mathematics, Written Composition, Science, and Social Studies.

### Organization

Tables 8a - 8c provide CRT Results for Grades 3, 5, and 7, respectively, while Table 8d provides GEE test results for first-time GEE test takers. The tables present CRT results for each school in the district receiving a *School Report Card*, with schools shown in school site code order. Also, comparison data are presented for the district and the state.

The tables reflect both the number of students taking the test and the percent of students who meet or exceed standards for the respective grade levels. Thus, the percent of students passing a specific test is the percent scoring at or above the performance standard that the state has set in that subject area.

### Data Presentation: *School Report Cards*

The *1997-98 School Report Cards* present school, district, and state percent passing rates by grade level and subject area.

### Definition

*Criterion-referenced tests (CRTs)*—tests that produce a score that tells how individuals/schools perform in achieving an established criteria; LEAP CRT results (as reported by *Progress Profiles*) show the number and percent of Louisiana students who meet or exceed state curriculum content standards.

### Data Source

The CRT indicator is based on student-level data tapes provided to the LDE by National Computer Systems, test contractor for the Louisiana Educational Assessment Program (LEAP).

## Norm-referenced Test (NRT) Results

---

The Louisiana Educational Assessment Program (LEAP) utilizes norm-referenced tests (NRTs) for national student comparisons with Louisiana students. From 1988 to 1992, Louisiana's NRT was the *California Achievement Test (CAT)* Form F, and from 1993 to 1997, Louisiana's NRT was the CAT/5. In 1997, the Iowa Tests were adopted for first administration in the spring of 1998. At grades 4, 6, and 8, the *Iowa Tests of Basic Skills (ITBS)* were administered and at grades 9, 10, and 11, the *Iowa Tests of Educational Development (ITED)* were administered.

ITBS consists of thirteen tests in the subject areas of reading, language, mathematics, social studies, science, and sources of information. The Mathematics Computation test was administered only at grade 4; Mathematics Computation is not used to calculate the Math Total, Core Total, nor the Composite score. The *Iowa Tests of Basic Skills* Composite score is the average of the scores for Reading Total, Language Total, Mathematics Total, Social Studies, Science, and Sources of Information Total. The NRT data tables for grades 4, 6, and 8 in the *School Report Cards* and *District Composite Reports* are based on the Composite percentile rank of the average standard score.

ITED consists of seven tests: Vocabulary, Correctness and Appropriateness of Expression, Ability to Do Quantitative Thinking, Ability to Interpret Literacy Materials, Analysis of Social Studies Materials, Analysis of Science Materials, and Use of Sources of Information. The *Iowa Tests of Educational Development* Composite score is the average of the scores for the seven tests. The NRT data tables for grades 9, 10, and 11 in the *School Report Cards* and *District Composite Reports* are based on the Composite percentile rank of the average standard score.

These test are administered to all students with the exception of special education students whose educational program is Alternative to Regular Placement (ARP). Scores are reported for all students not requiring accommodations to the standardization administration procedures.

### Organization

Tables 9a to 9f present 1997-98 NRT results for grades 4, 6, 8, 9, 10, and 11, respectively. Test results are presented for all schools in the district receiving a *School Report Card*, with schools listed in site code order. District, state, and national results are presented for comparison purposes.

Data are grouped as follows:

- *Quartile 4*--the percent of students who scored in the top 25% of students in the national norm group. If 32 of 100 students scored this high, Quartile 4 would read 32 percent.
- *Quartile 3*--the percent of students who scored between the 50th and the 74th national percentiles.
- *Quartile 2*-- the percent of students who scored between the 25th and 49th national percentiles.
- *Quartile 1*--the percent of students who scored between the 1st and 24th national percentiles.
- *Percentile Rank of the Average Standard Score for the National Student Norms*-- percentile rank of the average student in the school, district, or state. For example, a percentile rank of 48 for a school means that 48 percent of the students in the norm group scored at or below the average score obtained by the students in the school.

### Data Presentation: *School Report Card*

The 1997-98 *School Report Cards* present percentile rank of the average standard score for the national student norms at the school, district, and state levels.

### **Definition**

*Norm-referenced tests (NRTs)*-- These tests produce scores that tell how schools/individuals perform in comparison with other schools/individuals; LEAP NRT results (as reported by the *Progress Profiles*) show how Louisiana schools perform when compared with the district, state, and nation.

### **Data Source**

The NRT indicator is based on student-level data provided to the Louisiana Department of Education by Riverside Publishing, test contractor for The Iowa Tests.

# American College Test (ACT) Results

---

Scores on the American College Test (ACT) are widely used as an indicator of student preparedness for college. Most Louisiana public colleges and universities require that entering students take the ACT for admissions or placement purposes.

## Organization

Table 10, American College Test (ACT) Results, presents average composite scores for graduating seniors for each school in the district receiving a *School Report Card*. Schools are shown in school site code order. Comparison data are presented for the district (public schools only), the state (public and nonpublic schools combined), and the nation (public and nonpublic schools combined).

The ACT results shown include test scores for 1) twelfth graders who took the test in the current year and 2) twelfth graders who took the test as eleventh graders and elected not to retake it as seniors. If a student took the test in both the eleventh and twelfth grades, only the twelfth grade score has been included.

## Data Presentation: *School Report Card*

A college readiness indicator that includes ACT information is presented on the *1997-98 School Report Cards* of those schools that have a twelfth grade. The *School Report Cards* present 1997-98 average ACT composite scores at the school, district, state, and national levels.

## Method of Calculation

The ACT composite score is an average score based on the scores for the four ACT assessment tests (English, mathematics, reading, and science reasoning). The composite score, which ranges from 1 to 36, is a measure of the student's general educational development across these four subject areas.

## Data Source

The ACT indicator is based on student-level data supplied to the LDE by the testing contractor, American College Testing.

## References

Franklin, B.J., and Crone, L.J., (1993, April). *Louisiana Progress Profiles*. Paper presented at the annual meeting of the American Educational Research Association, Atlanta, Ga.

*LDE researchers have found the ACT performance of Louisiana students correlates highly with their performance on LEAP (CRT and NRT) tests. Further, those districts with the highest percentage of students taking the ACT have the highest ACT scores. This finding tends to dispute a widely-held assumption that the higher the percentage of students taking the ACT, the lower the average score (Franklin and Crone, 1993).*

## First-Time Freshmen Performance

---

The number of freshmen who enroll in remedial courses during their first semester of college is one measure of the extent to which high school graduates are prepared for college.

Since 1987, the Louisiana Board of Regents has collected and reported information on the number of Louisiana high school graduates who enroll in Louisiana colleges and universities the following fall and enroll in remedial/developmental courses. The 1993 Legislature, believing that parents should have access to this information, enacted legislation mandating that this first-time college freshmen data be incorporated into the *Progress Profiles*.

### Organization

Table 11, First-time College Freshmen Performance, presents the number and percent of students who 1) graduated from *Report Card* schools and 2) enrolled as first-time freshmen during the following fall semester at any of the state's two- and four-year public and private universities. The table also reports the number and percent of first-time college freshmen who were enrolled in at least one remedial course during their first regular semester of college study.

---

### Data Presentation: *School Report Card*

The college readiness indicator that includes first-time college freshmen information is presented on the 1997-98 *School Report Cards* of schools that have a twelfth grade.

*Note: The first-time college freshmen data reported on 1997-98 School Report Cards represent information on 1996-97 high school graduates.*

### Definitions

- *First-time college freshman*—a student who graduates from high school during a given school year and is enrolled full time in a Louisiana higher education institution the following fall semester. A student must begin the fall semester with fewer than 12 hours of credit previously attempted (not including advanced placement credits and correspondence study) to be considered a first-time freshman.

---

### Formula Used to Calculate First-time College Freshmen Percentages

$$\frac{\text{Percent of High School Graduates Who Were First-time College Freshmen}}{\text{Total Number of High School Graduates}} = \frac{\text{Number of First-time College Freshmen}}{\text{Total Number of High School Graduates}} \times 100$$

$$\frac{\text{Percent of First-time College Freshmen Who Enrolled in a Remedial Course}}{\text{Total Number of First-time College Freshmen}} = \frac{\text{Number of First-time College Freshmen Who Enrolled in a Remedial Course}}{\text{Total Number of First-time College Freshmen}} \times 100$$

- 
- *Graduate*—a student who successfully completes a BESE-approved education program, passes the Graduation Exit Examination (GEE), and thus earns a state-approved diploma. Students who earn GEDs are not included.
  - *Remedial course*—a course designed by a university to prepare students to succeed academically in college-level courses. Remedial/developmental courses may be offered for college credit (i.e., they are taken into consideration in determining whether students are enrolled part time or full time) but do not carry degree credit.

### **Method of Calculation**

The two formulas used in calculating the first-time college freshmen indicator are presented on the preceding page. The percent of high school graduates who become first-time college freshmen is calculated for public school graduates who attend in-state public colleges and universities.

### **Data Sources**

The first-time college freshmen indicator is based on data submitted to the LDE by Louisiana public and private universities to LDE in compliance with La. R.S. 17:3912 (since repealed).

<sup>1</sup> Represents graduates from the previous school year.

~ = Unavailable data

*aggregate days attendance*—the sum of the total number of days that students are *present* at the school site over the course of the school year.

*aggregate days membership*—the sum of the total number of days that students are *enrolled* (but not necessarily *present* at the school site) over the course of the school year.

*class*—a grouping of children under the primary supervision and instruction of an individual teacher for all or part of the instructional day, as reported for purposes of the *Annual School Report* (ASR) and identifiable by a specific ASR course code.

*combination school category*—any school whose grade structure falls within the K-12 range and is not described by any of the other school category definitions. These schools generally contain some grades in the K-6 range and grades in the 9-12 range. Examples would include grade configurations such as K-12, K-3, 9-12, 4-6, and 9-12.

*criterion-referenced test (CRT)*—tests that produce a score that tells how individuals/schools perform in achieving an established criterion; LEAP CRT results (as reported by *Progress Profiles*) show the number and percent of Louisiana students who meet or exceed state curriculum content standards.

*cumulative enrollment*—the sum of all students enrolled in a school or district for at least one school day during the course of the school year, used as the denominator for calculating school- and district-level suspension and expulsion percents.

*day of attendance*—a student is considered in attendance when he or she 1) is physically present at a school site or is participating in an authorized school activity and 2) is under the supervision of authorized personnel. This definition extends to students who are homebound, assigned to and participating in drug rehabilitation programs that contain a state-approved education component, or participating in school-authorized field trips.

“Students who meet the above criteria and are present at the school site for 26-50% of the student’s instructional day shall be credited with a half day’s attendance. Those who meet the above

criteria and are present for at least 51% of the student’s instructional day are credited with a whole day’s attendance. Students who are not physically present or who are participating for 25% or less of their instructional day will be considered absent for reporting purposes. Absences, whether excused or unexcused, shall be counted as an absence for reporting to the Department.” (Bulletin 741)

*dropout*—the National Center for Education Statistics (NCES) defines a dropout as “an individual who was enrolled in school at some time during the previous school year, was not enrolled at the beginning of the current school year, has not graduated from high school or completed an approved educational program, and does not meet any of the following exclusive conditions: transfer to another public school district, private school, or state- or district-approved education program; temporary absence due to suspension or school-approved illness; or death.”

“For purposes of applying the dropout definition, the following definitions also apply:

1. A school year is defined as the 12-month period of time beginning October 1 and ending September 30.
2. An individual has graduated from high school or completed a state- or district-approved education program upon receipt of formal recognition from school authorities.
3. A state or district approved program is one that leads to receipt of formal recognition from school authorities. It may include special education programs, home-based instruction, and school-sponsored secondary (but **NOT** adult) programs leading to a GED or some other certification differing from the regular diploma” (NCES, 1993).

*elementary school category*—any school whose grade structure falls within the K-8 range, excludes grades in the 9-12 range, and does not fit the definition for middle/junior high.

*faculty*—school-based instructional personnel. In addition to full-time classroom teachers, these individuals include principals, assistant

---

principals, guidance counselors, librarians, and other instructional staff (provided they teach at least one course).

*first-time college freshman*—a student who graduates from high school during a given school year and is enrolled full time in a Louisiana higher education institution the following fall semester. A student must begin the fall semester with fewer than 12 hours credit previously attempted (not including advanced placement credits and correspondence study) to be considered a first-time freshman.

*graduate*—a student who successfully completes a BESE-approved education program, passes the Graduation Exit Examination (GEE), and thus earns a state-approved diploma. Students who earn GEDs are not included.

*high school category*—any school whose grade structure falls within the 6-12 range and includes grades in the 10-12 range, or any school that contains only grade 9.

*in-school expulsion*—student is temporarily removed from his/her usual classroom placement to an alternative setting for a period of time specified by the LEA and no interruption of instructional services occurs.

*in-school suspension*—student is temporarily removed from his/her usual classroom placement to an alternative setting for a minimum of one complete school day and no interruption of instructional services occurs.

*Percentile rank of average standard scores for national student norms*—percentile rank of the average student in the school, district, or state. For example, a percentile rank of 48 for a school means that 48 percent of the students in the norm group scored at or below the average score obtained by the students in the school.

*middle/junior high category*—any school whose grade structure falls within the 4-9 range, includes grades 7 or 8 and excludes grades in the K-3 and 10-12 ranges.

*norm-referenced test (NRT)*—tests that produce a score that tells how individuals/schools perform in comparison with other individuals/schools; LEAP NRT results (as reported by *Progress Profiles*) show how Louisiana schools perform when compared with the district, state, and nation.

*October 1 membership*—total number of students enrolled in a school on October 1, which is operationally defined by NCES as the first day of the academic school year.

*out-of-school expulsion*—removal (exit) of a student from school for a determined number of days with no provision of instructional services.

*out-of-school suspension*—student is temporarily prohibited from participation in his/her usual placement within school with no provision of instructional service; only suspensions resulting in removal for at least one full day are included.

*percent of student attendance*—the ratio of aggregate days student attendance to aggregate days membership.

*remedial course*—a course designed by a university to prepare students to succeed academically in college-level courses. Remedial/developmental courses may be offered for college credit (i.e., they are taken into consideration in determining whether students are part-time or full-time) but do not carry degree credit.
